

Shading Fractions of Shapes

Shade the given fraction of each shape.

1. Shade $\frac{1}{2}$ of the circle. 	2. Shade $\frac{3}{4}$ of the rectangle. 	3. Shade $\frac{1}{3}$ of the circle. 
4. Shade $\frac{2}{5}$ of the rectangle. 	5. Shade $\frac{4}{6}$ of the hexagon. 	6. Shade $\frac{5}{8}$ of the rectangle. 
7. Shade $\frac{3}{6}$ of the circle. 	8. Shade $\frac{2}{3}$ of the rectangle. 	9. Shade $\frac{5}{6}$ of the hexagon. 
10. Shade $\frac{1}{4}$ of the rectangle. 	11. Shade $\frac{2}{8}$ of the circle. 	12. Shade $\frac{3}{5}$ of the hexagon. 

Remember:

- The denominator tells you how many equal parts the shape is divided into.
- The numerator tells you how many of those parts to shade.
- Shade the parts neatly and stay within the lines.
