Shade Decimals on Number Lines

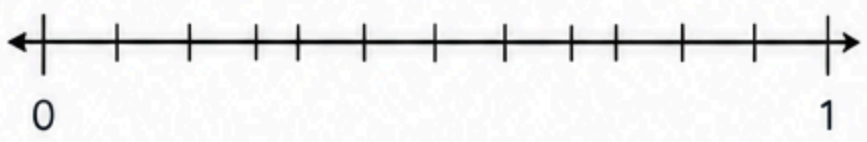

Mark and shade the given decimal on each number line.

Use the number line divisions to help you identify the place value.

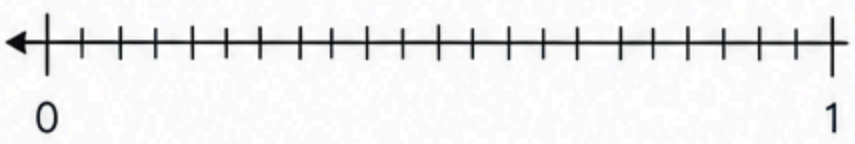

1. Shade 0.3 on the number line (divided into tenths).

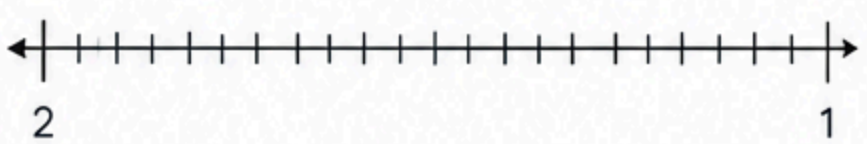

2. Shade 0.7 on the number line (divided into tenths).

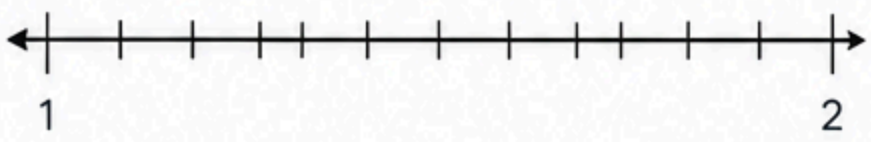

3. Shade 0.45 on the number line (divided into hundredths).

4. Shade 0.82 on the number line (divided into hundredths).

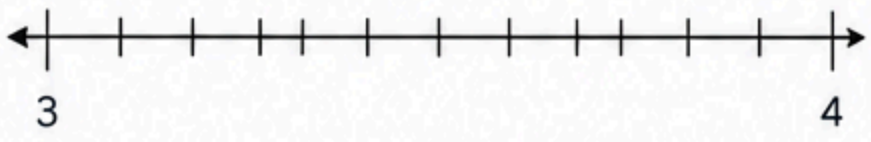

5. Shade 1.6 on the number line (divided into tenths).

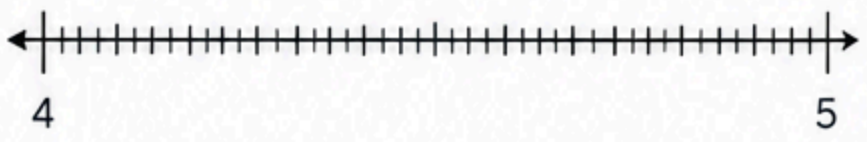

6. Shade 2.35 on the number line (divided into hundredths).

7. Shade 3.9 on the number line (divided into tenths).

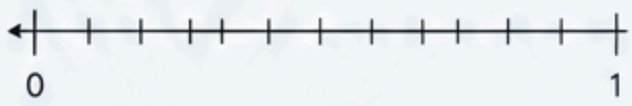

8. Shade 4.67 on the number line (divided into hundredths).

Remember:

- Tenths mean 10 equal parts (e.g. 0.1, 0.2, ... 0.9).
- Hundredths mean 100 equal parts (e.g. 0.01, 0.02, ... 0.99).
- The number to the right of the decimal point tells you the smaller place value (tenths or hundredths).

Tenths (10 parts)

Hundredths (100 parts)
